## Fall Protection Training Seminar

Fall protection is a complicated issue and one of the most important faced by an employer or worksite supervisor. With over 100,000 reported incidents per year, falls from heights almost always result in serious injury.

In the construction industry, falls are the number one cause of worker death. In **any** industry, not having fall protection can have serious consequences.

When it comes to fall protection, there is no margin for error. Every day, workers risk their lives to accomplish elevated tasks that are essential to the development and operation of our world. From 1992-2000 there were over 3,400 deaths due to falls from heights.

The key to effective fall protection training is practical, hands-on experience. At the end of the session, you will be able to:

1. Discuss the causes of falls and when fall protection is required: why the OSHA Standard at 4 feet, 6 feet, or 15 feet.
2. Identify categories of fall protection.
3. Determine how to select fall protection, anchorage, body support, and connectors.

You'll also enjoy the experience of our hands-on demonstrations when DBI/SALA's mobile demonstration vehicles show drop-tests and force measuring instruments to demonstrate arresting forces workers would experience during a fall.

### Fall Protection Seminar

#### When:

Tuesday March 25th  
8:00 am to 12:00 pm  
Registration starts at 7:30am

#### Where:

Eigerlab  
605 Fulton Avenue  
Rockford, Illinois 61103

Early Registration: \$75.00  
At Door: \$100.00

#### Registration Contact:

John Vaughan  
Fax: 815.633-6609  
Email:
