I. **Purpose.** This Notice continues a Local Emphasis Program (LEP) for conducting programmed inspections at grain handling facilities in the state of Kansas in an effort to reduce injuries, illnesses and deaths.

II. **Scope.** This Notice applies to the Wichita Area Office for grain handling locations throughout the State of Kansas. Specifically, Standard Industrial Classification (SIC) codes 2041, 2044, 2048, 4221 and 5153 will be targeted. All operations controlled by the selected establishment such as grain elevators, grain storage, milling operations, fertilizer, feed, chemical and farm machinery and equipment repair and maintenance will be included in the inspection activity.

III. **Action.** The Acting Regional Administrator and the Area Director of the Wichita Area Office shall ensure that the procedures established in this instruction are adhered to in the scheduling of programmed inspections.

IV. **Expiration.** This Notice expires on September 30, 2015, and may be renewed based upon the program's evaluation at that time.

V. **References.**

   A. OSHA instruction CPL 02-00-150, Field Operations Manual (FOM), April 4, 2011

   B. OSHA Instruction CPL 02-00-025, Scheduling Systems for Programmed Inspections, January 4, 1995

   C. OSHA Instruction CPL 04-00-001, Procedures for Approval of Local Emphasis Programs (LEPs) and Experimental Programs, March 28, 1994

   D. OSHA Instruction CPL 02-00-051, Enforcement Exemptions and Limitations Under the Appropriations Act, 05/28/98 and Change (Appendix A) dated May 27, 2014, or current version

VI. **Background.** The U. S. Department of Labor and specifically OSHA recognize the need to focus enforcement efforts at facilities where fatalities, injuries and illnesses occur at higher rates. In Kansas, the grain handling industry experienced the highest number of workplace fatalities which resulted in an
OSHA inspection. From January 1, 2000 through September 30, 2013, the grain handling industry (SIC 5153) reported 24 work-related deaths in Kansas. In FY 2012, a single incident in this industry claimed the lives of 6 workers. In FY 2014, 28% of the inspections conducted were the result of complaints alleging serious hazards.

The hazards associated with grain handling facilities are well recognized. Employees are exposed to the potential of fires and explosions, and other significant hazards such as falls, grain bin entry, engulfment, confined spaces, and rail car operations. The Wichita Area Office has determined that a renewed OSHA enforcement presence is warranted due to the continuing incidences of fatalities in grain handling facilities throughout the State.

VII. Outreach. The Wichita Area Office will continue to make available outreach programs that support the purpose of this LEP to identify and reduce workplace hazards associated with grain handling and their associated work operations. Outreach programs with employers, professional associations, and local unions may include meetings, training, education, mailings, speeches or other activities designed to involve employee and management stakeholders in the identification and elimination of hazards at grain handling establishments. A News Release was issued to announce the commencement of this LEP on November 8, 2010.

VIII. Inspection Targeting/Site Selection.

A. A listing of establishments with SIC codes 2041, 2044, 2048, 4221, and 5153 has been provided by OSHA’s Office of Statistics based on Dun & Bradstreet information. Other sources have been consulted for use to identify additional establishments with the above-listed SIC codes that may not be included in the list provided. These sources include USDA grain handling inspection locations, OSHA IMIS/OIS data for grain handling facilities, as well as private sources such as industry listings and the ‘yellow pages’.

B. All identified establishments have been combined to make one master list. The list is arranged alphabetically, and then a random number will be assigned using the most current version of Microsoft Excel's Random Sample Function, i.e., RANDBETWEEN function in Microsoft Excel to determine the order of inspections. To prevent duplicate random numbers from being generated for multiple records each time the file is opened, the entire worksheet is highlighted, copied, and pasted into a blank worksheet as “Values (V)”. The new worksheet will have each random number saved as a value not a formula, which will allow the worksheet to be opened without the possibility of changing the already assigned random numbers. This Notice will continue the use of this master list, as developed from the
initial listing of establishments provided by OSHA's Office of Statistics, for cycle development.

C. Cycles of ten (10) will be generated. Each inspection cycle must be completed before another cycle is generated from that list. An establishment may be carried over to another cycle for any of the reasons set forth in CPL 02-00-025.

D. All compliance personnel shall be instructed to be on the lookout for grain handling worksites. If an establishment (with one of the targeted SIC codes) is identified after the development of the master list, an inspection will be scheduled. Deletion criteria (outlined below) will be applied.

IX. Deletion Criteria

A. Establishments who have received a comprehensive safety and health inspection within the last twelve (12) months (from the date the inspection cycle was generated) will be deleted.

B. If a selected establishment has received a comprehensive safety inspection within the last twelve (12) months but not a comprehensive health inspection, a comprehensive health inspection will be initiated and vice versa.

X. Inspection Procedures

A. Inspections will be conducted in accordance with all applicable provisions of the FOM.

B. All inspections will be comprehensive. Resources permitting, joint safety and health inspections will be conducted simultaneously. When this is not possible, either the safety or a health inspection will be initiated with the opposite discipline to follow as resources become available or the Area Director may allow a cross-trained CSHO to address both safety and health hazards.

C. All inspections will include an evaluation of hazards related to grain handling. Special attention will be paid to engulfment hazards and fire/explosion hazards created by combustible dust. Other hazards addressed will include noise, confined spaces, machine guarding, and falls.

D. Unprogrammed events such as fatalities, catastrophes, complaints, follow-up inspections and referrals shall be scheduled for inspection in accordance with existing procedures outlined in the FOM. If an establishment identified in the Scope (II. above) receives an
unprogrammed inspection, a comprehensive safety and/or health inspection will be initiated (as stated in X.B. above) in conjunction with the unprogrammed activity, unless that establishment meets the deletion criteria in IX. above.

XI. Recording in OIS

A. All inspections conducted under this program (programmed and unprogrammed) shall be coded Local Emphasis Program, with the designation "GRAIN" on the appropriate OIS forms.

B. If it is determined that an inspection will not commence at an establishment due to the process not active or incorrect SIC code, the appropriate OIS forms shall be coded “No Inspection”.

C. All consultation activities (requests, visits and compliance assistance) conducted at establishments in the SIC/NAICS codes included in this LEP will be coded with “GRAIN” in the Local Emphasis Program field on the appropriate forms.

XII. Evaluation Procedures. No later than October 30 of each year this program remains in effect; the Wichita Area Office will prepare a formal written evaluation of this LEP in the format specified by OSHA Instruction CPL 04-00-001, Appendix A.
