1.) Employers may proceed with excavation work if the underground utility owner has been contacted but not yet identified their installations within 24hrs. True False

Explain your answer: 
__________________________________________________________________________
__________________________________________________________________________
__________________________________________________________________________

2.) Structural ramps used solely by employees as a means of access and egress from excavations shall be designed by a Competent Person.

3.) Excavations greater then 4' feet shall be tested before employees enter where potentially Hazardous atmospheres could reasonably exist.

4.) Excavations must be inspected daily by an Authorized Person. True False

Explain your answer: A Competent Person is required to conduct daily inspections

5.) At least one copy of the Tabulated Data which identifies the Registered Professional Engineer who approved the data, shall be maintained at the jobsite during construction of the protective system.

6.) A Trench and an Excavation is the same thing: True False

Explain your answer: Trenches are deep then their width

7.) The bending strength for mixed oak or equivalent wood used for timber shoring must not be less than 1500 lbs per square inch. True False

Explain your answer: 800 lbs

8.) A “Trench Box” and a “Trench Shield” are the same thing. True False

9.) A “wale” refers to the vertical members of a shoring system. True False

This Material was produced under grant number SH-22224-11-60-F-18 from the Occupational Safety and Health Administration, U.S. Department of Labor. It does not necessarily reflect the views or policies of the U.S. Department of Labor, nor does it mention of trade names, commercial products, or organizations imply endorsement by the U.S. Government.
1.) Employers may proceed with excavation work if the underground utility owner has been contacted but not yet identified their installations within 24hrs.  

   True  False

Explain your answer:

____________________________________________________________________________________________________________________________________________________

____________________________________________________________________________________________________________________________________________________

2.) Structural ramps used solely by employees as a means of access and egress from excavations shall be designed by a ________________.

3.) Excavations greater then _____’ feet shall be tested before employees enter where potentially ____________ atmospheres could reasonably exist.

4.) Excavations must be inspected daily by an Authorized Person.  True  False

Explain your answer:

5.) At least one copy of the ________________ which identifies the ___________________________ who approved the data, shall be maintained at the jobsite during construction of the protective system.

6.) A Trench and an Excavation is the same thing:  True  False

Explain your answer:

7.) The bending strength for mixed oak or equivalent wood used for timber shoring must not be less than 1500 lbs per square inch.  True  False

Explain your answer:

8.) A “Trench Box” and a “Trench Shield” are the same thing.  True  False

9.) A “wale” refers to the vertical members of a shoring system.  True  False

10.) Sloping is an example of an ___________________.  Trench boxes and shielding in an example of an ____________________.
1.) Employers may proceed with excavation work if the underground utility owner has been contacted but not yet identified their installations within 24hrs.  

   True  False

   Explain your answer: ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________
   ____________________________________________________________

2.) Structural ramps used solely by employees as a means of access and egress from excavations shall be designed by a __________________.

3.) Excavations greater than ____’ feet shall be tested before employees enter where potentially _____________ atmospheres could reasonably exist.

4.) Excavations must be inspected daily by an Authorized Person.  

   True  False

   Explain your answer:______________________________

5.) At least one copy of the ____________ which identifies the ________________________________ who approved the data, shall be maintained at the jobsite during construction of the protective system.

6.) A Trench and an Excavation is the same thing:

   True  False

   Explain your answer:______________________________

7.) The bending strength for mixed oak or equivalent wood used for timber shoring must not be less than 1500 lbs per square inch.  

   True  False

   Explain your answer:______________________________

8.) A “Trench Box” and a “Trench Shield” are the same thing.  

   True  False

9.) A “wale” refers to the vertical members of a shoring system.  

   True  False
