Please circle the TRUE or FALSE with best one answer.

1. Basic teaching point of this training program is to understand the overview and hazards associated with the PSM Standard and the 14 elements of that program?
   TRUE  FALSE

2. Process Hazard Analysis (PHA’s) only uses two methodologies: the “WHAT IF” or the “HAZOP? True  FALSE

3. Mechanical integrity documentation must have these items listed on them to be valid, name of the person performing the inspection, name and or number that identifies the equipment, date of the inspection, the type of inspection be used, and the recommendations that result from the inspection?
   TRUE  FALSE

4. The Process Safety Management Standard is most effective in the plant's manufacturing environment with employee participation.
   TRUE  FALSE

5. Process safety management requirements do not apply to contractors.
   TRUE  FALSE

6. The Purpose of Process Safety is to Prevent or minimize the consequences of catastrophic releases of toxic, reactive, flammable or explosive chemicals that may result in toxic, fire or explosion hazards.
   TRUE  FALSE

7. Reactions can release thermal energy or create a rapid increase in volume/pressure which can lead to mechanical failure or loss of containment.
   TRUE  FALSE

8. Process Safety focuses on controlling the potential release of hazardous substances.
   TRUE  FALSE
