PM Bucket Elevator
Post-Questionnaire

Choose (circle) the ONE best answer.

1. Belts and lagging should be of a non-conductive material.  TRUE  FALSE

2. Rub blocks need to be positioned to check alignment of the belt through the ________________ of the boot adjustment range.
   a. Front or beginning portion  c. Back or end portion
   b. Middle portion  d. Entire portion

3. All lubricating grease is not the same. Using the grease type specified by the manufacturer does matter.  TRUE  FALSE

4. Speed sensors in the boot section should shut down equipment when belt speed is reduced by how much of the normal operating speed?
   a. No more than 10%  c. No more than 20%
   b. No more than 15%  d. No more than 25%

5. Inspection of belts and buckets should occur when running at reduced speed.  TRUE  FALSE

6. What are three (3) types of splices.
   a. Butt, lap, mechanical  c. Double butt, double overlap, lap
   b. Double overlap, lap, mechanical  d. Butt, double overlap, lap
Choose (circle) the ONE best answer.
