

alternative method will in no way provide less than the same measure of protection than that afforded the miners under the existing standard.

Docket Number: M-2008-019-C.

Petitioner: White County Coal, LLC, 1525 County Road 1300 N, P.O. Box 457, Carmi, Illinois 62821.

Mine: Pattiki Mine, MSHA I.D. No. 11-03058, located in White County, Illinois.

Regulation Affected: 30 CFR 75.503 (Permissible electric face equipment; maintenance) and 30 CFR 18.35(a)(5)(i) and (ii) (Portable (trailing) cables and cords).

Modification Request: The petitioner requests a modification of the existing standard to permit the maximum length of trailing cables to be increased for supplying power to permissible pumps. The petitioner states that: (1) This petition will only apply to trailing cables supplying three-phase 480-volt power for permissible pumps; (2) the maximum length of the 480-volt power for permissible pumps will be 4000 feet; (3) the 480-volt power for permissible pump trailing cables will not be smaller than #6 American Wire Gauge (AWG); (4) all circuit breakers used to protect #6 AWG trailing cables exceeding 500 feet in length will have an instantaneous trip unit calibrated to trip at 60 amperes; (5) the circuit breakers trip setting will be sealed or locked, and have permanent legible labels identifying the circuit breakers as being suitable for protecting #6 AWG cables; (6) replacement of instantaneous trip units used to protect #6 AWG trailing cables exceeding 500 feet in length will be calibrated to trip at 60 amperes and this setting will be sealed or locked; (7) all circuit breakers used to protect #2 AWG trailing cables exceeding 500 feet in length will have instantaneous trip units calibrated to trip at 150 amperes and the trip setting of these circuit breakers will be sealed or locked and will have permanent legible labels that will be maintained as legible to identify the circuit breaker as being suitable for protecting #2 AWG cables; (8) replacement of instantaneous trip units, used to protect #2 AWG trailing cables exceeding 500 feet in length will be calibrated to trip at 150 feet in length and calibrated to trip at 150 amperes and the setting will be sealed or locked; and (9) permanent warning labels will be installed and maintained on the cover(s) of the power center identifying the location of each sealed or locked short-circuit protection device to warn the miners not to change or alter the short-circuit settings. Persons may review a complete description of petitioner's alternative

method and procedures at the MSHA address listed in the notice. The petitioner states that the alternative method will not be implemented until miners designated to examine the integrity of the seals or locks verify the short-circuit settings, and proper procedures training has been provided for examining trailing cables for defects and damage. The training for the miners will include the following elements: (1) Training in mining methods and operating procedures for protecting the trailing cables against damage; (2) training in the proper procedures for examining the trailing cables to ensure safe operating conditions; (3) training in the hazards of setting the instantaneous circuit breakers too high to adequately protect the trailing cables; and (4) training on how to verify that interrupting device(s) protecting the trailing cable(s) are properly set and maintained. The petitioner further states that within 60 days after the petition is granted, revisions to the Part 48 training plan will be submitted to the District Manager for the area in which the mine is located. The petitioner asserts that the proposed alternative method will at all times guarantee no less than the same measure of protection to the miners as would be provided by the existing standard.
