SUPPLEMENTARY INFORMATION: This ICR seeks approval under the PRA for revisions to the Process Safety Management Standard of Highly Hazardous Chemicals (PSM Standard) information collection requirements codified in regulations 29 CFR 1910.119. The major information collection requirements in the PSM Standard include: Consulting with workers and their representatives on and providing them access to process hazard analyses and the development of other elements of the standard; developing a written action plan for implementing employee participation in process hazard analyses and other elements of the standard; completing a compilation of written process safety information; performing a process hazard analysis; documenting actions taken to resolve process hazard analysis team findings and recommendations; updating, revalidating and retaining the process hazard analysis; developing and implementing written operating procedures that are accessible to workers; reviewing operating procedures as often as necessary and certifying the procedures annually; developing and implementing safe work practices; preparing training records; informing contract employers of known hazards and pertinent provisions of the emergency action plan; maintaining a contract worker injury and illness log; establishing written procedures to

maintain the integrity of and document inspections and tests of process equipment; providing information on permits issued for hot work operations; establishing and implementing written procedures to manage process changes; preparing reports at the conclusion of incident investigations, documenting resolutions and corrective measures, and reviewing the reports with affected personnel; establishing and implementing an emergency action plan; developing a compliance audit report and certifying compliance; and disclosing information necessary to comply with the Standard to persons responsible for compiling process safety information.

This information collection has been classified as a revision because of including additional retail exemption establishments and a change to an OSHA enforcement policy on the minimum concentration of a chemical in a process needed in order to count that chemical toward the threshold quantity levels that trigger coverage under the PSM Standard. Occupational Safety and Health Act sections 2(b)(9) and 8(c) authorize this information collection. See 29 U.S.C. 651(b)(9) and 657(c).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1218-0200. The current approval is scheduled to expire on May 31, 2016; however, the DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. New requirements would only take effect upon OMB approval. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on March 21, 2016 (81 FR 15130).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure

appropriate consideration, comments should mention OMB Control Number 1218–0200. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.
